## Spa News Flash #7 – October '07

### They Are Here!!!

It has been already one year since we started to work with Derma Pod Microdermabrasion. The main Derma Pod Microdermabrasion system is highly efficient, but we decided to add three satellite units, so our clients can take full advantage of the latest technological breakthroughs:

The **Kinelif**t satellite combines light therapy and micro-currents providing treatments that leave the face looking younger and silky smooth.

The **Pure Light** satellite uses light therapy to erase the traces of acne.

The **Dermalift** satellite smoothes the neck, chest and neckline for instant results.

#### **The KINELIFT program - ANTI-AGEING TREATMENT FOR THE FACE**

The Kinelif

t program is a non-invasive treatment that is specifically designed to suit each client's skin type and level of sensitivity. It's double stimulation has a positive impact on age-related epidermal, dermal and muscular problems. It helps improve muscle tone and stimulates the production of collagen, in addition to activating the production of ATP, and fighting the signs of aging.

#### HOW IS IT DONE?

##### **Kinelif**t - Multi-layer Skin Rejuvenation

The Kinelif

t treatment program is designed to control the aging process by stimulating the epidermis and it's underlying structure.

This is accomplished through:

- LED light therapy at 640 nm
- Modulated Microcurrents

This three dimensional facial stimulation process corrects age-related problems affecting the epidermis, dermis and muscles. It improves muscle tone, stimulates collagen and ATP production and fights the signs of aging.

**Fact:** The red light spectrum triggers a wave of energy, and stimulates photo receptors in the skin to induce a cellular response. Wavelengths of 640 nm increase collagen production fivefold, triggering repair mechanisms and stimulating fibroblasts. It also increases circulation and speeds up the healing process by carrying more oxygen and nutrients to the skin.

**Fact:** Micro-currents duplicate the natural bioelectrical currents found in the body. Micro-currents retrain muscle tissue achieving visible lifting results, restoring facial contour and slowing the aging process.

##### **Dermalift** - Neck & Neckline Lifting

The Dermalift uses a new form of Microcurrent technology, pulsed and modulated in a precise pattern to retrain larger muscle groups, tightening and lifting the facial contour and neckline.

The Dermalift Satellite also includes a special phase for TransDermal topical delivery. This phase uses new, balanced bi-polar wave-form currents to facilitate production infusion, and to smooth away fine lines and wrinkles. This unique delivery system eliminates all problems associated with conventional iontophoresis procedures.

##### **Purelight** - Blemishes and Pigmentation Problems

The Purelight treatment program is an amazing acne clearing program that features 420 nanometers of magenta light. This acne-fighting wavelength is favoured for its anti-bacterial properties, and is used to clear blemishes as it soothes and calms the sebaceous glands. Reduces pigmentation and eliminates redness associated with the use of aggressive products.

##### **The DERMALIFT program - NECK AND CHEST**

Over time, the neck and chest muscles lose their elasticity and begin to sag. The Dermalift program is designed to re-establish muscle tone to these muscle groups. The micro-currents associated with this treatment are accurately modulated in an effort to retrain and firm these particular muscles.

##### **The PURE LIGHT program - A TRIPLE THREAT AGAINST ACNE AND HYPERPIGMENTATION**

The treatment associated with the Pure Light Program focuses on destroying the P. acnes bacteria, reducing inflammation and preventing the sebaceous glands from secreting too much sebum thus reducing acne proliferation. To ensure maximum safety and comfort, the electrode is fitted with a device, which makes sure that the LEDs are only activated upon contact with the skin and that they disengage automatically when contact is broken.

**The LEDs used in the Derma Pod satellites** are not standard light emitting diodes (SLD) commonly used in light-based devices.

The Extreme Super Luminous Diodes (ESLD) used in Kinelif

t and Purelight satellites are **ten times more powerful**. With pure narrow band frequencies they safely and effectively induce a **faster photo response**.

#### The Summer is over!

It definitely looks like it and feels like it. When the leaves turn gold and red, when the Inner Harbour is hiding in the milky fog and the fields are covered with orange pumpkin tablecloths we know that this is the time for our skin to rest and rejuvenate. In the next two months we suggest you do either gentle chemical peels or more aggressive microdermabrasion. It is the perfect time (after exfoliation) to apply rejuvenating nourishing or moisturizing serums.

#### FREE GIFT FOR YOU!

If you like the art photographs on display in our spa – good news! We are preparing a beautiful, elegant 2008 wall calendar, full of these (and other) photos! Our calendar will include helpful tips, reminders, and its classy, upscale gallery style design will make a nice accent in your room.

Specially designed for our spa, it will be available in late November. Visit us this Christmas Season, and get your free copy or two for you, family and friends – or as gifts!

#### Stay Tuned...

Subscribing to our news on-line, you will be the first to know about our special promotions and offers, our new staff, and much more. [www.spaspacevictoria.com](http://www.spaspacevictoria.com) If you received this newsletter from a friend, visit our Web site and subscribe on-line to get your own copy and don't miss out on valuable offers!

We hope to see you soon, and please always remember – if you are not sure what's best for you – we offer FREE skin consultation. So, book on-line, or call us now!

Thank you, and see you again soon!

- Grazyna, Rhonda, Debbie, and Chris
